SkenData

**SkenData**
Value. Risk. Energy.

SkenData
EnergyCheck

We turn building data into success.

With our **innovative digital solutions** for the areas of value, risk and energy, we highlight new approaches and opportunities – for building portfolios that remain sustainable and profitable.

EnergyCheck

SkenData's EnergyCheck delivers comprehensive energy assessments for residential buildings in record time. From energy performance certificates to detailed renovation roadmaps, including subsidies add-on and solar potential analysis — **the entire process is fully digital.**

Renovation roadmap

The **renovation roadmap** serves as a key advisory, planning, and management tool. It provides information on **the current energy state of a building** and indicates which renovation measures are deemed appropriate and sensible for the building.

Energy Performance Certificate

As a result, a **GEG-compliant and DIN V 18599 standardized energy performance certificate** is created, providing a clear overview of key energy metrics, including energy efficiency class, energy demands, and CO_2 equivalents. An **officially registered energy performance certificate** is available as an optional add-on if needed.

Adaptable and scalable solutions

Our solution **adapts to your needs** – whether you are an independent assessor or a financial institution. You gain access to an **unlimited number** of EnergyChecks and renovation roadmaps. The registered energy performance certificate is available as an optional add-on.

Energy Performance Certificates.
Instant. Digital.

Professional Documents

In addition to registered **energy performance certificates,** you will receive comprehensive, **professionally prepared renovation roadmaps** as PDFs containing all relevant information – instantly & digitally.

High-Precision Data Quality

Thanks to **advanced algorithms** and comprehensive databases, we deliver **highly accurate and reliable results.**

Tailored Digital Solutions

Whether you are an **independent assessor** or a **financial institution** –we provide adaptable, API-ready solutions that seamlessly integrate into your **specific workflows and requirements.**

Ideal for EU taxonomy-compliant reporting

Use the **EnergyCheck to identify energy KPIs** (energy efficiency class, energy consumption, CO_2 equivalents) at the portfolio level **to meet regulatory requirements** (CSRD, MaRisk), e.g., as a CO_2 opening balance.
